

PRESS RELEASE (September 2025): PRÉIME® PDRN BOOSTER SOLUTION

MONESTHETICA

Simplicity and Precision, by Design: Préime® PDRN Booster Solution.

Skin, the integument which serves as a barrier to protect against the environment, is constantly under assault and ageing is inevitable. The triggers for ageing can be from within (intrinsic) or from outside (extrinsic) the body, and skin regeneration affects both function and cosmesis. This requires appropriate signals, building blocks, and checks/ balances – and these constitute true anti-ageing.

Regeneration involves changes to the structure and health of skin, and PDRN (polydeoxyribonucleotide), a naturally occurring polymer, has a well-established mechanism for this. Marine-sourced PDRN has long been used in the medical field to modulate inflammation and improve wound-healing, with salmon DNA being 95% identical to human DNA.

PDRN Booster Solution – from EMA Aesthetics, an Irish company present in 35 countries – is an integral part of the Préime® regenerative line-up, which is guided by the proprietary S.C.O.P.E.S. system – evaluating the Source, Concentration, Origin, Purity, Efficacy, and Stability of regenerative actives to ensure optimal performance.

Control by clinically optimized concentration: we believe that 1% PDRN provides the most favourable-level for active interaction needed to promote skin regeneration but not trigger excess irritation and inflammation. The inclusion of select enhancers takes things further, allowing Préime® *PDRN Booster Solution* to work as follows:

1. Activating fibroblasts to produce more collagen and elastin, for structural improvement;
2. Via the A2A pathway for the anti-inflammatory effects, which have multiple benefits;
3. Promotion of angiogenesis, which nourishes new and existing tissues, for improved health;
4. Skin-lightening effect, due directly to PDRN and because of glutathione (GSH 1%). Improving hyperpigmentation which may result from exposure to U.V., chronic inflammatory states, or pigmentation disorders, is of notable value to many seeking a refined and uniform complexion.

The other key additives for biorevitalization are commonly found in quality skincare: non-cross-linked hyaluronates (for barrier support and plumper skin); Argireline® or hexapeptide-8 (for wrinkle-softening); and, Matrixyl® or pentapeptide-4 (for cutaneous restructuring).

The result: youthful-looking regenerated skin. Who wouldn't want that?

Dr. Niro SIVATHASAN | Perth & Sydney

BSc, MB BS (Lond), DRCOG, MRCS (Eng), DU (Plast), FACAM, FACCSC (Med), FACCSC (Surg), FAACS.

Dr. Niro Sivathasan is a highly published, multiple board-certified doctor with 21 years' extensive international experience focussed on cosmetic medicine and aesthetic plastic surgery. He has had advisory and leadership roles for numerous, global, pharmaceutical-/ device- companies, and for cosmetic medical chain clinics spanning Australia. 'Dr. Niro' is known for his advocacy of natural results, underpinned by pragmatism and safety, and has been chosen to support Préime® Pure Exosomes in Australia and New Zealand.
